

## Vitreous fibers classification

### What

Surveys and chemical analysis to classify glass fibers and their related risk level.

### Why

EU has classified some types of glass fiber as carcinogenic. The classification is made with specific analysis and tests, according to international legislation.

### Who

Owners, users or duty-holders of public or private properties where glass fibers are found must classify the materials. Surveys are the guidance for a correct chemical risks assessment.

### Experience

Veram carries on the classification of glass fibers through its laboratories, accredited by the Italian Department of Health for asbestos analysis.
