

Chemical risk assessment with algorithm

What

We carry out the professional chemical risk assessment with the use of algorithms.

Why

The first step of the chemical risk assessment consists in the check of exposure scenarios with algorithms that allow to direct the subsequent preventive actions.

Who

Employers whose production processes include the presence of hazardous chemicals must assess the risk. The evaluation is aimed at eliminating and minimizing the risk.

Experience

Veram regularly performs air sampling surveys for the research of airborne contaminants, through its calibrated instruments, in accordance with international technical standards.
